Orphan of Creation Allen, Roger MacBride 2018-07-17 An anthropologist stumbles across a stunning secret that will put the very definition of humanity suddenly in doubt. Are the bone she discovers buried on a old Mississippi plantation the remains of humans, or apes -- or something else?The answer will turn her life, and the world, upsidedown. What the critics said about ORPHAN OF CREATION 'Allen's attention to detail is sterling...totally believable...well portrayed...dead accurate.... This book goes a long way toward doing for anthropology what Timescape did for high-energy particle physics: humanizing it, making its real workings accessible to a new audience. Anyone who likes good hard science in their fiction will have to go a long way to find a better-done book.' --Locus 'a novel that reminds us that moral and social evolution depends not only on our knowing where we are going, but remembering where we have been.' -- Christian Science Monitor 'Allen's writing technique is a well-balanced blend of dialogue, action, description and narrative-each in proper proportion to the other... a fine read ... word of mouth will bring acclaim that is more than deserved.' --Otherrealms Orphan of Creation takes an interesting scientific premise and lets it loose upon real human beings revealing to the reader a higher level of understanding of the world. Orphan is science and fiction; in examining the human condition, it does what both ideally intend to do.' --The New York Review of Science Fiction 'Mr.Allen has found an idea worthy of his talent. The book has that unmistakably correct feel of authenticity. A very readable as well as thoughtful story. Bravo to Mr.Allen for writing this risky book. Read it. Then pass it on to your mundane friends.

With any luck, it will drive them crazy.' --Lan's Lantern FoxAcre Press is proud to present its books on the Google Play store.

Movable Bed Physical Models Hsieh Wen Shen 2012-12-06 For centuries, physical models have been used to investigate complex hydraulic problems. Leonardo da Vinci (1452-1519) stated, "I will treat of such a subject. But first of all, I shall make a few experiments and then demonstrate why bodies are forced to act in this matter. " Even with the current advancements of mathematical numerical models, certain complex three-dimensional flow phenomena must still rely on physical model studies. Mathematical models cannot provide adequate solutions if physical processes involved are not completely known. Physical models are particularly attractive to investigate phenomena-involved sediment movements because many three-dimensional sediment processes are still unclear at this stage. Theoretically, there are numerous factors governing movable bed processes and it is nearly impossible to design model studies to obey all the model criteria. Sometimes, appropriate lightweight materials are difficult or too costly to obtain. Often, distorted models are used due to the limitation of available space and the requirement for greater vertical flow depth to investigate vertical differences of various parameters. The turbulence level in the model may also be maintained at a sufficient level to reproduce a similar flow pattern in the prototype. Frequently, engineers are forced to employ distorted models that cannot be designed to satisfy all governing criteria correctly. Thus each hydraulic laboratory has developed its own rules for model testing and a great deal of experience is needed to interpret model results.

Surrealism and the Art of Crime Jonathan Paul Eburne 2008 Corpses mark surrealism's path through the twentieth century, providing material evidence of the violence in modern life. Though the shifting group of poets, artists, and critics who made up the surrealist movement were witness to total war, revolutionary violence, and mass killing, it was the tawdry reality of everyday crime that fascinated them. Jonathan P. Eburne shows us how this focus reveals the relationship between aesthetics and politics in the thought and artwork of the surrealists and establishes their movement as a useful platform for addressing the contemporary problem of violence, both individual and political. In a book strikingly illustrated with surrealist artworks and their sometimes gruesome source material, Eburne addresses key individual works by both better-known surrealist writers and artists (including André Breton, Louis Aragon, Aimé Césaire, Jacques Lacan, Georges Bataille, Max Ernst, and Salvador Dalí) and lesser-known figures (such as René Crevel, Simone Breton, Leonora Carrington, Benjamin Péret, and Jules Monnerot). For Eburne the art of crime denotes an array of cultural production including sensationalist journalism, detective mysteries, police blotters, crime scene photos, and documents of medical and legal opinion as well as the roman noir, in particular the first crime novel of the American Chester Himes. The surrealists collected and scrutinized such materials, using them as the inspiration for the outpouring of political tracts, pamphlets, and artworks through which they sought to expose the forms of violence perpetrated in the name of the state, its courts, and respectable bourgeois values. Concluding with the surrealists' quarrel with the existentialists and their bitter condemnation of France's anticolonial wars, *Surrealism and the Art of Crime* establishes surrealism as a vital element in the intellectual, political, and artistic history of the twentieth century.

The Yellow Wallpaper Illustrated Charlotte Perkins Gilman 2021-06-14 "The Yellow Wallpaper" is a short story by American writer Charlotte Perkins Gilman, first published in January 1892 in *The New England Magazine*. [1] It is regarded as an important early work of American feminist literature, due to its illustration of the attitudes towards mental and physical health of women in the 19th century.

Narrated in the first person, the story is a collection of journal entries written by a woman whose physician husband (John) has rented an old mansion for the summer. Forgoing other rooms in the house, the couple moves into the upstairs nursery. As a form of treatment, the unnamed woman is forbidden from working, and is encouraged to eat well and get plenty of air, so she can recuperate from what he calls a "temporary nervous depression - a slight hysterical tendency", a diagnosis common to women during that period
