Memorial Tributes National Academy of Engineering 2013-01-28 This is the 16th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates. These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind. In most cases, the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased. Through its members and foreign associates, the Academy carries out the responsibilities for which it was established in 1964. Under the charter of the National Academy of Sciences, the National Academy of Engineering was formed as a parallel organization of outstanding engineers. Members are elected on the basis of significant contributions to engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology. The National Academies share a responsibility to advise the federal government on matters of science and technology. The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities, interests, and achievements of our members and foreign associates, our colleagues and friends, whose special gifts we remember in this book.

Sociological Paradigms and Organisational Analysis Gibson Burrell 2017-03-02 The authors argue in this book that social theory can usefully be conceived in terms of four broad paradigms, based upon different sets of meta-theoretical assumptions with regard to the nature of social science and the nature of society. The four paradigms - Functionalist, Interpretive, Radical Humanist and Radical Structuralist - derive from quite distinct intellectual traditions, and present four mutually exclusive views of the social world. Each stands in its own right, and generates its own distinctive approach to the analysis of social life. The authors provide extensive reviews of the four paradigms, tracing the evolution and inter-relationships between the various sociological schools of thought within each. They then proceed to relate theories of organisation to this wider background. This book covers a great range of intellectual territory. It makes a number of important contributions to our understanding of sociology and organisational analysis, and will prove an invaluable guide to theorists, researchers and students in a variety of social science disciplines. It stands as a discourse in social theory, drawing upon the general area of organisation studies - industrial sociology, organisation theory, organisational psychology, and industrial relations - as a means of illustrating more general sociological themes. In addition to reviewing and evaluating existing work, it provides a framework for appraising future developments in the area of organisational analysis, and suggests the form which some of these developments are likely to take.

How People Learn II National Academies of Sciences, Engineering, and Medicine 2018-10-27 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an

indispensable resource to understand learning throughout the lifespan for educators of students and adults.
